PARTNER UPDATE – May 18th, 2020

Hello all,

We're now offering KIS Cloud Systems Management, providing cloud-based management, inventory, monitoring, and Microsoft patching for laptops, desktops, and servers.

KIS Cloud Systems Management works with Windows or Mac laptops/desktops and servers, and with selected Linux distributions. VMware host monitoring is also supported.

By installing a small agent onto each system, KIS engineers/support staff can instantly initiate a screen sharing session to solve technical issues.

KIS Cloud Systems Management includes:

- Remote control
- Hardware/software inventory
- Microsoft inventory reports for software audits & true-up
- Patching for Windows desktops, laptops and servers
- Same fixed price per Windows or Mac endpoint or VMware host
- 12-month contract, billed monthly

Please contact me or your KIS account rep for more information on KIS Cloud Systems Management.

Stay safe and healthy,
Allan
