

PARTNER UPDATE – June 2nd, 2020

Hello all,

Over the last several months, many of us are working from home, and even when at work, we are constantly on the defense from phishing and social engineering criminals. Recently, criminals have upped their game and are pushing hard to fool you with new methods to divulging private information.

We've seen email, web content, and other methods used by them to get to you. I want to spend a few minutes with you to see if you are one of us who feel we need to do more to stop this. KIS and our Cybersecurity partners are ready to go over your concerns and work with you to stop the flood of malicious content that continually gets reported in the media and damages organizations and individuals. To name a few, here are some of our highest topics we see in need most:

- Email risk management and protection
- Content filtering and edge protection
- Visibility and response to anomalous behavior
- Cloud and virtualization defenses and protection
- Ransomware and other encryption attack protection
- User training and awareness
- Recovery and incident response services

Stay safe and healthy,
Craig
