On 2020 Cyberattacks

Dear reader,

As the end of 2020 nears, IT departments still face many challenges concerning the "new norm." Cybersecurity has also been evolving over the years to meet and exceed IT departments' goals. I've noticed an increasing interest from many clients, and the industry overall, to provide visibility and effective monitoring, alerts, and actions on anomalies in networks and data. If the right solutions and configurations are implemented, IT departments will be positioned to stop the ever-evolving threats from bad actors and other attacks quickly and effectively.

At KIS-Keep IT Simple, we have the solutions you need to meet and exceed your cybersecurity and data protection goals. We have the specialists who are ready to review your infrastructure, identify critical areas and vulnerabilities, develop a plan to implement the proper controls and tools that will work best for your specific needs, and assist you with implementing and managing the risks proactively.

KIS would like to offer you a quick review of your cybersecurity program and control policy. We can provide our recommendations to improve what you have already built, encompassing industry best practices and tools that will provide the visibility and action you need. Even if we confirm your approach, it is always good to have another perspective to guarantee your secured path. We're here to help.

Please contact us by phone or chat online for a free 1-hour review.

Keep IT Simple, and Keep IT Safe.
